

Sub E2
D2 barrel of the marking device between the first end and the second end;
a clamp wherein the clamp removably secures the flat article
around the barrel of the marking device; and
a cap having a lead extending from the cap wherein the cap is
removably attached to the barrel at the second end.

Claim 15 has been amended as follows:

Sub E3
D3 15. A marking device accessory kit, the accessory kit comprising:
a marking device having a body defined between a first end and
a second end wherein the first end has a tip capable of producing a
mark;
a sheath that substantially covers the body of the barrel between
the first end and the second end;
an end cap removably attached on the second end of the marking
device wherein the end cap is interchangeable between a plurality of
marking devices; and
a connecting lead having a first end and a second end wherein the
first end of the connecting lead extends from the end cap and is
removably connected to the end cap.

Claim 17 has been amended as follows:

Sub E4
D4 17. A method of using a marking device, the method comprising the
steps of:
providing a barrel having a body defined between a first end and
a second end wherein the first end has a tip capable of producing a
mark;
providing a sheath that substantially covers the barrel between
the first end and the second end;
providing an end cap for fitting over the second end of the
barrel wherein the end cap has a connecting lead that extends from the

end cap;

fitting the sheath over the barrel between the first end and the second end; and

fitting the end cap over the second end of the barrel.
